.NET Developer

Integration team Gdask

Blue Water Shipping, founded in Denmark in 1972, is a global provider of logistics services in modern supply chain management. Our team of professionals offers complete and tailor-made solutions to meet shipping requirements worldwide. We pride ourselves on delivering the best service and highest quality in the industry.

Over the past years, we've embarked on an ambitious digital transformation journey, focusing on customer-centricity and optimizing our IT services. As we continue to grow, we're strengthening our Integration team in Poland.

Position Overview

As a .NET Developer on the Integration team, you'll take part in designing, creating, and maintaining seamless integrations between systems, whether it's business-to-business or application-to-application. Working closely with experienced colleagues and multiple application teams, you'll turn technical requirements into reliable, real-world solutions and grow your expertise in cloud-based integration on Azure. Strong backend development skills are a must-have.

Responsibilities

- Develop and maintain .NET applications in C# on Azure Cloud.
- Integrate with existing systems using modern cloud services (e.g. RESTful APIs, Message Queues, microservices).
- Work with version control and contribute to automated build and deployment processes.
- Troubleshoot integration issues together with the team.
- Collaborate with application teams in an Agile environment.
- Take part in code reviews and dynamic problem-solving sessions.

Your background

- Engineer or Master's degree in an IT related field or equivalent IT experience.
- **.NET Development:** Good working knowledge of the .NET Core framework and C# for building backend applications that meet integration needs.
- **Integration Technologies:** Experience in working with some integration technologies, such as RESTful APIs, FTP, and Message Queues.
- **Version Control and DevOps:** Familiarity with version control systems (such as Git) and continuous integration/continuous deployment (CI/CD) pipelines.
- **Azure:** Hands-on experience with some of the following Azure Cloud services: Storage, Azure Functions, Azure SQL, Key Vault, and Service Bus.
- **Problem-Solving and Troubleshooting:** Ability to analyze and diagnose integration issues, with willingness to learn from more senior colleagues.
- **Collaborative Team Player:** Good communicator and team player, capable of collaborating with developers, business analysts and stakeholders.
- **Agile Methodologies:** Experience working in Agile environments, delivering solutions in an iterative way, and adapting to changing priorities.
- At least 2–3 years of commercial experience as a .NET Developer.
- Good command of English.

What we offer

- Private medical care (Medicover),
- Flexible hybrid model of working: 3 days in the office and 2 days at home,
- Multisport card (FitProfit),
- Training and conference budget,
- Increased tax-deductible costs (creative work),
- Christmas gifts.

•Friendly work atmosphere driven by strong family values (family-owned business),
•Social events and team-building meetings both locally and globally.

Practical Details
